WORK EXPERIENCE

Practice Operations Coordinator

Nick Sheptooha Dental Practice | 2019 - Present

- **Technology Research & Implementation:** Independently researched, evaluated and implemented new software, digital tools and operational processes, providing staff guidance and recommending practical technology solutions.
- **Systems Administration & Technical Support:** Served as the internal point of contact for clinical and administrative systems, troubleshooting software and hardware issues while supporting the adoption and day-to-day operation of practice technology.
- **Practice Operations & Coordination:** Coordinated clinical, administrative and financial workflows across a busy dental practice, supporting clinicians, suppliers and practice management to ensure smooth day-to-day operations.
- **Workflow Optimisation:** Researched, implemented and refined digital workflows that improved operational efficiency, reduced manual administration and enhanced patient and practice processes.

PROFILE

Detail-oriented problem solver with a background in healthcare operations, systems administration and process optimisation. Combines technical aptitude, software development and operational experience to build reliable, user-focused applications. Drawn to thoughtful systems, clear interfaces and practical software solutions.

TECHNICAL SKILLS

Languages & Frameworks: HTML, CSS, JavaScript, TypeScript, Python, React, Next.js, Node.js, Flask

Data & Infrastructure: PostgreSQL, SQLAlchemy, Docker, AWS, GCP, Terraform

Tools & Workflow: Figma, Adobe Photoshop, CI/CD, Git

PROJECTS

CineCritic | Full-Stack Application [➤](#)

- Built a movie discovery and review platform using React, Express, PostgreSQL and TMDB.
- Added JWT authentication and Docker-based CI/CD workflows for Google Cloud, earning High Distinction across the deployment assessment.

Redlands Bonsai Society | Next.js [➤](#)

- Built and deployed a responsive Next.js and TypeScript website for a volunteer-run community club, replacing its legacy site.
- Designed a file-driven content system requiring no CMS, with date-aware events, newsletter publishing, calendar subscriptions and forms backed by API routes and transactional email.

Plex Toolkit | Python CLI [➤](#)

- Developed a Python CLI automating Plex collection building, metadata matching and artwork standardisation.
- Structured the project with reusable service modules, testing and linting workflows.
